1 [Fast detection of communication patterns in distributed executions](#)

Thomas Kunz, Michiel F. H. Seuren

November 1997 **Proceedings of the 1997 conference of the Centre for Advanced Studies on Collaborative research CASCON '97**

Publisher: IBM Press

Full text available: [pdf\(4.21 MB\)](#) Additional Information: [full citation](#), [abstract](#), [reference terms](#)

Understanding distributed applications is a tedious and difficult task. Visualizations process-time diagrams are often used to obtain a better understanding of the execution of an application. The visualization tool we use is Poet, an event tracer developed at the University of Waterloo. However, these diagrams are often very complex and do not provide with the desired overview of the application. In our experience, such tools display occurrences of non-trivial communication ...

Additional Information: [full citation](#), [abstract](#), [reference](#)

The objective of this course is to provide an introduction to the issues that must be considered when building high-fidelity 3D engaging shared virtual environments. The principles of human perception guide important development of algorithms and techniques for collaboration, graphical, auditory, and haptic rendering. We aim to show how human perception is exploited to achieve realism in high fidelity environments within the limits of available finite computational resources. In this course we ...

1 [Special issue on wireless extensions to the internet: Fast handovers and context transfers in mobile networks](#)

Rajeev Koodli, Charles E. Perkins

October 2001 **ACM SIGCOMM Computer Communication Review**, Volume 31 Iss

Publisher: ACM Press

Full text available: [pdf\(1.16 MB\)](#) Additional Information: [full citation](#), [abstract](#), [reference](#)

We describe recent work enabling fast handovers and context transfer between ac offering Internet connectivity for mobile (often wireless) nodes. We present our fr engineering general context transfer solutions, and a protocol which uses the fram provide a simple yet general mechanism for carrying out context transfers during Since our mechanism operates at the network level, we expect that it will be the r expedient way to provide for seamless han ...

Keywords: IPv6, context transfer, fast handover, mobile IP, mobile network

2 [Telecommunication applications: analysis and simulation: Multi-scale integrat information and telecommunications system \(MIITS\): first results from a large-to-end network simulator](#)

Roman Waupotitsch, Stephan Eidenbenz, James P. Smith, Lukas Kroc

December 2006 **Proceedings of the 37th conference on Winter simulation W**

Publisher: Winter Simulation Conference

Full text available: [pdf\(387.00 KB\)](#) Additional Information: [full citation](#), [abstract](#), [reference](#)

Performing realistic simulations of Internet packet traffic on a national or global le daunting task from both the modeling and the computational perspective. We pres MIITS (Multi-scale Integrated Information and Telecommunications System) tool t implements a novel approach to network simulation and report first scaling results realistic Internet scenario. MIITS' end-to-end approach to network simulation relie
